## Summer Camp

A summer camp has been arranged at our project locations in Kalechiwadi Pune and Marangadu, Trivandrum.

Children received eight informative sessions coupled with interactive and fun activities, planned over 4-8 days during their vacation time in the month of May. The camp covered useful topics like climate change, Earth, water, soil, pollution, plastic pollution, trees, and waste management.

Each session included theory and practical activities that kept the children engaged. Homework was also given each day.

Prior to the camp, the project staff and facilitators received Training of Trainers (ToT) training on the modules in Pune at the end of April month.
